Study on Involuntary Denial Boarding and Air Traffic Landing in United States

Each individual was responsible for finding the data set pre-processing of the data and cleaning of the data. Taking one data set each we successfully loaded the data to Mongo DB using python. Every one collaborated with each other to clarify doubts help in clearing errors and to train each individual on the respective work done. We considered each data set loaded to Mongo DB performed ETL using python and then loaded the data to postgre-sql server and used python to perform few visualizations like bar graphs, pie charts, column charts, donut charts, heat map and so on.
